

EZ Cup Cutter

BRAND NEW CUP CUTTER.

The EZ Cup Cutter is being adopted by leading country clubs and golf courses across the world to effortlessly change hole positions on their greens. If you change holes regularly it will help reduce the wear on your turf while keeping the cup always looking fresh. No more back wrenching strain or struggle releasing the plug.

This electronic cutting tool, cleanly and cuts, isolates, removes and effortlessly replaces a cylinder of soil.

EZ PRO cuts a cylindrical core of soil that precisely matches the USGA and Royal & Ancient Club specifications, which makes changing hole locations and “setting” the cup a breeze.

This is a regulation cup cutter, which is built to last for years of effortless pin placements.

Cup Cutting the EZ way

Place the unit vertically over the area to be cut.
Flip the switch while applying some vertical pressure controlling the speed until the stop gauge reaches the top of the Putting surface.

To remove saw cutter from hole, rotate the grip handle to reverse the process.

Replace an existing hole:

Position the unit part way into existing hole. Flip the switch on, no need to apply vertical pressure against the ground. When the proper depth has been obtained the earth slug will be ejected from the cutter.
